Executive summary

If 2024 was the year companies experimented with GenAI, 2025 is the year organizations are racing to scale.

Our 2025 AI Maturity Index measures how the top 300 companies in the Forbes Global 2000 are advancing their AI strategies. The index evaluates an organization’s AI maturity across five key dimensions to determine how effectively it leverages AI technologies to transform business operations, unlock new value, and future-proof its competitive position. The dimensions are: strong executive support, investment in technology and infrastructure, leveraging AI for operational excellence, investment in workforce development and culture, and the establishment of AI ethics and risk management. Together, these dimensions provide a comprehensive snapshot of how effectively AI is being embedded and scaled within an organization’s operating model.

The race is on, and the stakes are rising. In 2025, the competitive advantage does not lie in who’s piloting generative AI but in who has rolled it out at scale. The central managerial insight is this: AI transformation is more about alignment than algorithms; aligning technology with governance, partnerships with purpose, and human capability with ambition. Our analysis reveals that companies in the top 100 of the AI Maturity Index show consistently higher growth rates in both revenue and market capitalization, suggesting that AI maturity may correlate with financial momentum.¹

While technology giants dominate the top rungs of the AI Maturity Index, the Financial Services sector stands out for its breadth of representation, with 32 Financial Services firms in the top 100, exceeding the Technology sector’s 21. This finding underlines that the Financial Services sector is rapidly becoming a proving ground for enterprise AI at scale.

1. The interpretation is based on comparing financial metrics of the top 100 and bottom 200 companies in the AI Maturity Index. Statistically significant differences ($p < 0.05$) in revenue and market capitalization growth rates may suggest that firms with higher AI maturity tend to achieve stronger financial growth.

Across other sectors, distinct transformation narratives are taking shape:

- In **Automotive**, Volkswagen Group and Mercedes-Benz are redefining mobility through software-defined vehicles and in-house AI copilots.
- In **Consumer Goods and Retail**, Walmart and Kroger are leading with AI-driven supply chains and adaptive merchandising.
- In **Energy and Utilities**, Equinor and Engie are embedding predictive intelligence into grid and carbon systems.
- In **Financial Services**, Mastercard® and KKR are scaling generative AI (GenAI) in fraud prevention and investment modeling.
- In **Healthcare**, Medtronic and CVS Health are harnessing AI to personalize care and optimize delivery.
- In **Insurance**, Ping An and Zurich Insurance are pioneering ecosystem-based AI platforms.
- In **Manufacturing**, Siemens and GE Aerospace are embedding AI across design-to-production cycles.
- In the **Pharmaceutical** sector, AstraZeneca and Merck & Co. are applying AI to drug discovery and clinical optimization.
- In **Telecommunications**, Deutsche Telekom and KDDI Corporation are re-architecting networks and customer interactions through AI-first principles.
- And in **Technology**, Nvidia and Microsoft are not only enabling the GenAI revolution, they are setting the maturity benchmarks others are racing to match.

What sets AI leaders apart, along with technological prowess, is organizational maturity. Companies leading the AI Maturity Index demonstrate a clear capacity to translate pilots into performance supported by strong governance, integrated data platforms, skilled talent, and deep ecosystem collaborations. While many organizations remain stuck in pilot purgatory, the frontrunners are scaling AI across the enterprise, embedding it into workflows, decision systems, and customer touchpoints.

The 2025 results

	Name	Ranking	Industry	Country
1	NVIDIA	100.0	Technology Products and Services	United States
2	Microsoft	90.7	Technology Products and Services	United States
3	Alphabet	88.5	Technology Products and Services	United States
4	Meta Platforms	80.6	Technology Products and Services	United States
5	Amazon	79.8	Technology Products and Services	United States
6	SAP	77.1	Technology Products and Services	Germany
7	IBM	76.8	Technology Products and Services	United States
8	Tencent Holdings	75.9	Technology Products and Services	China
9	Sony	75.3	Technology Products and Services	Japan
10	Mastercard	74.1	Financial Services	United States
11	Alibaba Group	73.5	Technology Products and Services	China
12	Intel	73.1	Technology Products and Services	United States
13	Cisco Systems	72.4	Technology Products and Services	United States
14	Oracle	70.4	Technology Products and Services	United States
15	Accenture	70.1	Professional Services	Ireland
16	Salesforce	69.7	Technology Products and Services	United States
17	Deutsche Telekom	69.6	Telecommunications	Germany
18	Samsung Electronics	67.6	Technology Products and Services	South Korea
19	KKR	67.5	Financial Services	United States
20	Qualcomm	65.1	Technology Products and Services	United States
21	BlackRock	63.3	Financial Services	United States
22	KDDI	63.3	Telecommunications	Japan
23	AstraZeneca	63.2	Pharmaceuticals	United Kingdom

24	UBS	63.0	Financial Services	Switzerland
25	Volkswagen Group	61.7	Automotive	Germany
26	Mercedes-Benz Group	61.6	Automotive	Germany
27	Goldman Sachs Group	60.4	Financial Services	United States
28	Siemens	59.5	Manufacturing	Germany
29	Visa	58.6	Financial Services	United States
30	Macquarie Group	58.3	Financial Services	Australia
31	HSBC Holdings	58.3	Financial Services	United Kingdom
32	Apple	57.9	Technology Products and Services	United States
33	Dell Technologies	57.7	Technology Products and Services	United States
34	GE Aerospace	57.0	Manufacturing	United States
35	Hitachi	56.8	Manufacturing	Japan
36	Morgan Stanley	56.6	Financial Services	United States
37	Nippon Telegraph & Tel	56.5	Telecommunications	Japan
38	Ping An Insurance Group	56.0	Insurance	China
39	Citigroup	55.8	Financial Services	United States
40	JPMorgan Chase	55.3	Financial Services	United States
41	Apollo Global Management	55.2	Financial Services	United States
42	Bank of New York Mellon	55.2	Financial Services	United States
43	Barclays	55.1	Financial Services	United Kingdom
44	BNP Paribas	55.1	Financial Services	France
45	Hon Hai Precision	55.0	Technology Products and Services	Taiwan
46	Reliance Industries	54.7	Diversified	India
47	FedEx	54.4	Transportation and Logistics	United States
48	Merck & Co.	54.0	Pharmaceuticals	United States
49	Commonwealth Bank	53.9	Financial Services	Australia
50	Eli Lilly	53.6	Pharmaceuticals	United States

What does it take to be AI-mature in 2025?

From our research, five core lessons emerge about what it takes to lead in enterprise AI today.

01 From efficiency to creativity and growth

While early AI use focused on automation (e.g., predictive maintenance in Energy and Utilities or automated underwriting in Insurance), 2025 shows a strategic shift toward growth and creativity. Procter & Gamble uses generative AI for brand storytelling. AstraZeneca and Sanofi apply LLMs to accelerate R&D. Meta and Nvidia are developing AI-native product platforms entirely from scratch.

Takeaway

Managers should look beyond efficiency metrics and explore how AI can redefine value creation through personalization, faster innovation cycles, and entirely new business models.

02 Partnerships drive acceleration

Across all 10 sectors, the leading firms move faster by co-developing AI solutions with major technology partners. Examples include BYD Company Limited with PTC, Siemens with Microsoft and Nvidia, Sanofi with OpenAI, and Aramco with AWS and Qualcomm.

Takeaway

AI progress increasingly depends on ecosystem participation. Managers might consider building adaptive partner networks rather than proprietary silos.

03 AI leadership must be central, not peripheral

Across all industries, AI success is anchored in top-level commitment and structure. Companies that have advanced furthest, such as Mercedes-Benz (Chief Data & AI Officer), Zurich Insurance (Group Head of AI), and Microsoft (Chief AI Transformation Officer), have elevated AI governance to the C-suite, making it part of strategic decision-making rather than an isolated innovation function.

Takeaway

Executives should formalize AI leadership and align it with business strategy. Appointing a senior AI leader or creating an AI council signals intent and coordinates adoption across functions.

04 AI readiness is organizational, not just technical

The most mature firms pair technology investments with workforce enablement. Unilever has trained over 23,000 employees in AI fluency. Visa has reskilled 10,000, and Hitachi has rolled out GitHub Copilot to 270,000 staff. These organizations treat AI as a change management challenge, not just a series of technology projects.

Takeaway

AI implementation succeeds when organizations integrate human capability-building, like training, experimentation, and cultural adaptation, alongside technical deployment.

05 Responsible AI is now a competitive necessity

Every sector is codifying ethical AI frameworks, both for compliance and trust. For example, AXA, Roche, Mercedes-Benz, Goldman Sachs, and Volkswagen all publish explicit AI principles addressing fairness, safety, and accountability. Firms like Ford and Roche go further, embedding oversight boards and regular audits.

Takeaway

Companies need transparent AI governance to mitigate legal, reputational, and ethical risk. Practitioners should establish a cross-functional framework early to ensure responsible and trusted use.

In this report, we take a deeper dive into *10 sectors*, discover what key trends emerge from the data and what strategic lessons can be drawn, and *analyze which companies rank highest on this indicator and why.*

Cross-sector overview

Looking across the top 10 companies in each of the 10 industries, a common pattern emerges: executive leadership, ethical governance, workforce development, strong partnerships, and enterprise-wide adoption. Where they diverge is in how they apply AI.

From embedded intelligence to service enhancement

A major point of differentiation lies in whether AI is a product or a capability. In hardware-intensive sectors like Automotive and Manufacturing, AI is physically embedded into end products and systems. BYD’s XuanJi Architecture, Mercedes-Benz’s MB.OS™, and ABB’s Industrial Knowledge Vault™ illustrate how AI becomes part of the product itself, enabling autonomous control, real-time sensing, or smart interaction. Conversely, in service-driven sectors, AI primarily augments existing offerings. AXA and Zurich use AI platforms to improve underwriting and risk modeling rather than selling AI products. Target’s Store Companion™ and Home Depot’s Magic Apron™ serve as digital aids rather than standalone products. In Technology, companies like Microsoft (Copilot®), IBM (watsonx®), and Amazon (Nova™) blur the boundary by turning AI into both infrastructure and a service, enabling customers to embed intelligence in their own operations.

Application focus: tailored to industry needs

While every firm embeds AI across its business, each sector emphasizes distinct domains of application. In Automotive and Manufacturing, companies focus on AI for engineering, production, and autonomy. For instance, Volkswagen and Mercedes-Benz use generative and behavioral AI for driver assistance, digital twins, and vehicle operating systems, while Siemens and GE Aerospace apply AI to optimize factory operations and predictive maintenance.

In contrast, Healthcare and pharma companies prioritize AI for R&D, diagnostics, and patient outcomes. Johnson & Johnson integrates AI into surgery through its MONARCH™ QUEST and VELYS™ systems, while Roche and Sanofi use large language models to accelerate drug discovery and automate regulatory workflows.

Meanwhile, Financial Services and Insurance firms deploy AI for decision-making and risk management. Ping An, Mastercard, and Zurich Insurance automate underwriting, claims, and fraud detection with AI agents, achieving real-time decisions and cost reductions.

Finally, firms in Consumer Goods and Retail and Telecommunications emphasize AI for personalization and customer interaction. Walmart’s Wallaby™ LLM, Unilever’s Beauty AI Studio™, and Verizon’s GenAI Business Assistant demonstrate how customer-facing AI enhances engagement and operational responsiveness.

Pace and scale of deployment: from cautious to hyper-scaled

The Technology and Telecommunications sectors are expanding AI at the fastest pace and largest scale. Microsoft, Nvidia, and Alphabet lead in AI infrastructure, building proprietary chips, LLMs, and foundation models, while China Mobile, Deutsche Telekom, and NTT invest billions in AI-ready data centers and hyperscale computing capacity. These firms treat AI as a platform technology underpinning all future products and services. By contrast, Healthcare, pharma, and Insurance firms proceed more cautiously due to regulatory scrutiny and ethical sensitivity. Cigna and Dai-ichi Life have established AI governance councils and internal sandboxes to ensure compliance before full rollout. Novartis, for instance, pilots AI in controlled environments before scaling to enterprise level. In industrial sectors, deployment is pragmatic and incremental: Schneider Electric, Equinor, and Aramco embed AI progressively within existing workflows (e.g., energy forecasting, emissions tracking, maintenance), aligning with safety and sustainability mandates. These industries emphasize measured scaling over rapid proliferation.

Governance maturity: regional and sectoral contrasts

AI governance frameworks are universal but differ markedly in maturity and emphasis. European-based corporations exhibit the most formalized, transparent governance aligned with public policy. AXA, Roche, Deutsche Telekom, and Siemens explicitly cite adherence to OECD or EU AI Act principles, with dedicated AI ethics boards and compliance reviews. Their approaches stress transparency, fairness, and human oversight. US-based companies like Goldman Sachs, Meta, and Walmart balance governance with rapid scaling by adopting Responsible AI principles but integrating them flexibly within innovation pipelines. Their governance models tend to be internalized and principle-based, emphasizing accountability rather than regulation. Asian leaders such as Ping An, BYD, and NTT take a hybrid approach: they combine strong executive oversight with pragmatic compliance, often linking AI governance to national frameworks (e.g., China’s AI model registration, Japan’s ethical AI codes). This reflects a regional blend of state-aligned oversight and innovation-driven governance.

Sector-specific highlights

Automotive

The Automotive sector continues its transformation from mechanical manufacturing to intelligent mobility. Leaders like Volkswagen Group and Mercedes-Benz are embedding AI at the core of vehicle design, user experience, and operational intelligence. Mercedes-Benz’s MB.OS platform and Volkswagen’s in-house AI copilots show a sector shifting toward software-defined vehicles and over-the-air optimization. Companies like BYD are also accelerating AI through partnerships with PTC, highlighting how ecosystems are becoming critical to scaling. While many automakers remain constrained by supply chain fragility and regulatory scrutiny, top performers distinguish themselves by investing in real-time AI-enabled operations, autonomous driving platforms, and smart customer experiences.

Executive checklist

- ☐ Are we treating AI as a core capability in mobility design, not just vehicle automation?
- ☐ Have we secured the partnerships needed to scale AI beyond R&D?
- ☐ Are we using AI to reduce time-to-market and create over-the-air software-driven experiences?

Name		Ranking	Country
1	Volkswagen Group	61.7	Germany
2	Mercedes-Benz Group	61.6	Germany
3	BYD	51.4	China
4	Honda Motor	49.6	Japan
5	Denso	49.4	Japan
6	Ford Motor	48.9	United States
7	Stellantis	48.8	Netherlands
8	KIA	47.6	South Korea
9	General Motors	46.8	United States
10	SAIC Motor	45.4	China

Insurance

Insurance leaders are moving from reactive underwriting to proactive, AI-powered risk modeling. Ping An Insurance and Zurich Insurance Group top the AI Maturity Index by integrating predictive AI models into core operations from fraud detection to dynamic policy pricing. Zurich’s Group Head of AI and Ping An’s AI research arm exemplify the strategic elevation of AI within enterprise structure. Notably, firms like Tokio Marine and AXA are using GenAI to support claims summarization and multilingual customer service, enhancing both accuracy and user experience. Responsible AI is a focus, with top companies publishing fairness and explainability standards to ensure regulatory trust.

Executive checklist

- ☐ Have we embedded AI throughout the underwriting, pricing, and claims lifecycle?
- ☐ Are our governance and transparency protocols keeping pace with expanding GenAI use cases?
- ☐ Do we have AI capabilities to scale globally and remain compliant?

	Name	Ranking	Country
1	Ping An Insurance Group	56.0	China
2	Zurich Insurance Group	52.7	Switzerland
3	Tokio Marine Holdings	49.2	Japan
4	AXA Group	48.4	France
5	Humana	45.6	United States
6	MS&AD Insurance	43.0	Japan
7	Dai-ichi Life Insurance	40.7	Japan
8	Travelers	40.1	United States
9	MetLife	39.1	United States
10	Swiss Re	38.6	Switzerland

Consumer Goods and Retail

In Consumer Goods and Retail, leaders like Walmart and Kroger are embedding AI into their supply chains, store operations, and customer experiences. Walmart’s use of GenAI in merchandising and associate assistance, alongside Kroger’s deployment of predictive analytics and smart shelf technologies, reflects a sector increasingly defined by real-time responsiveness and hyper-personalization. Companies such as L’Oréal and Nike are also embracing creative AI, using GenAI for brand storytelling, product customization, and trend forecasting. The shift from cost efficiency to creative differentiation is a hallmark of maturity in this sector, with top firms prioritizing agile experimentation, AI upskilling at scale, and end-to-end value chain transformation.

Executive checklist

- ☐ Are we using AI not only to optimize supply and demand but also to enhance creative marketing and brand expression?
- ☐ Do our frontline teams have access to AI tools that boost productivity and real-time decision-making?
- ☐ Have we integrated AI governance across consumer data privacy, pricing transparency, and ethical sourcing?

	Name	Ranking	Country
1	Walmart	50.7	United States
2	Kroger	43.6	United States
3	EssilorLuxottica	41.6	France
4	Procter & Gamble	36.4	United States
5	Lowe's	34.1	United States
6	Target	33.6	United States
7	Unilever	33.5	United Kingdom
8	The Home Depot	32.1	United States
9	L'Oréal	31.3	France
10	Nike	30.7	United States

Energy and Utilities

AI maturity in Energy and Utilities is increasingly tied to sustainability, grid intelligence, and predictive maintenance. Leaders like Equinor and Engie stand out for integrating AI into emissions tracking, grid forecasting, and safety optimization. SLB and PTT are leveraging digital twins and real-time subsurface analytics to optimize exploration and drilling and to reduce risk and environmental footprint. As regulatory pressures mount and demand for energy transitions grows, top firms in this sector are scaling AI for carbon measurement, asset performance monitoring, and anomaly detection. They also invest in AI talent with both engineering and environmental expertise, ensuring cross-domain innovation.

Executive checklist

- ☐ Are we using AI to drive measurable progress on sustainability and decarbonization goals?
- ☐ Have we built a robust digital twin infrastructure to scale predictive maintenance and grid optimization?
- ☐ Is AI embedded across both legacy and renewable operations, enabling us to balance resilience and transition?

	Name	Ranking	Country
1	Equinor	51.3	Norway
2	ENGIE	43.3	France
3	NextEra Energy	43.0	United States
4	SLB	41.2	France
5	Saudi Arabian Oil Company (Saudi Aramco)	40.2	Saudi Arabia
6	Petrobras	38.7	Brazil
7	PTT	37.9	Thailand
8	National Grid	36.7	United Kingdom
9	Chevron	35.5	United States
10	E.ON	33.5	Germany

Financial Services

The Financial Services sector is the most represented in the AI Maturity Index top 100, with leaders like Mastercard and KKR using GenAI to enhance investment modeling, customer service, and risk detection. Mastercard’s scaled deployment of GenAI in fraud monitoring and KKR’s AI-backed deal sourcing exemplify how AI is not just supporting but shaping decision-making. Responsible AI is a priority: Visa, HSBC, and Goldman Sachs have published AI principles and built cross-functional oversight teams. Top firms are also reskilling thousands of employees and embedding AI across functions.

Executive checklist

- ☐ Is our AI strategy coordinated across risk, compliance, product, and customer experience functions?
- ☐ Are we upskilling staff at scale to match the increasing complexity of AI-enabled financial products?
- ☐ Have we implemented transparent and auditable AI practices aligned with investor and regulatory expectations?

	Name	Ranking	Country
1	Mastercard	74.1	United States
2	KKR	67.5	United States
3	BlackRock	63.3	United States
4	UBS	63.0	Switzerland
5	Goldman Sachs Group	60.4	United States
6	Visa	58.6	United States
7	Macquarie Group	58.3	Australia
8	HSBC Holdings	58.3	United Kingdom
9	Morgan Stanley	56.6	United States
10	Citigroup	55.8	United States

Healthcare

AI in Healthcare is shifting from backend automation to frontline care enhancement. Top performers like Medtronic and CVS Health are embedding AI into diagnostics, remote patient monitoring, and clinical decision support. Medtronic uses AI for real-time surgical analytics and device optimization, while CVS Health integrates AI to personalize care plans and optimize pharmacy operations. Leaders in this sector are also investing in responsible AI frameworks to manage clinical risk and patient trust as they expand GenAI use in documentation, patient communication, and care triage. Cross-functional collaboration between data scientists, clinicians, and ethicists is emerging as a critical success factor.

Executive checklist

- ☐ Are we using AI to directly improve clinical outcomes and patient experiences, not just operational efficiency?
- ☐ Do we have strong governance models to oversee clinical-grade AI systems and protect patient trust?
- ☐ Are we enabling frontline healthcare providers with AI literacy and decision support tools?

	Name	Ranking	Country
1	Medtronic	49.8	Ireland
2	CVS Health	47.4	United States
3	UnitedHealth Group	47.0	United States
4	McKesson	45.5	United States
5	Cigna	44.3	United States
6	Thermo Fisher Scientific	44.0	United States
7	Cencora	37.8	United States
8	HCA Healthcare	33.0	United States
9	Abbott Laboratories	29.0	United States
10	Elevance Health	27.5	United States

Manufacturing

In Manufacturing, AI is rapidly advancing from predictive maintenance to intelligent automation and AI-native product development. Leaders like Siemens and GE Aerospace are embedding AI into production lines, supply chains, and digital twin ecosystems. Siemens’ partnership with Nvidia and GE’s use of AI in parts forecasting and defect detection reflect a trend toward full-stack industrial intelligence. Companies such as ABB and VINCI are scaling GenAI to assist engineers with design tasks and streamline documentation. Leaders in AI maturity differentiate by combining industrial AI applications with ecosystem partnerships and cross-disciplinary talent spanning engineering and data science.

Executive checklist

- ☐ Are we embedding AI into the full product lifecycle from R&D and design to factory operations and field service?
- ☐ Do we have partnerships in place to accelerate AI capabilities in edge computing and real-time analytics?
- ☐ Are we equipping engineers and operators with tools to collaborate with GenAI in design, documentation, and quality?

	Name	Ranking	Country
1	Siemens	59.5	Germany
2	GE Aerospace	57.0	United States
3	Hitachi	56.8	Japan
4	Schneider Electric	52.6	France
5	ABB	49.8	Switzerland
6	Contemporary Amperex Technology	49.3	China
7	Honeywell International	42.1	United States
8	VINCI	41.3	France
9	Lockheed Martin	39.0	United States
10	RTX	38.5	United States

Pharmaceuticals

Pharmaceutical companies are using GenAI to compress R&D timelines and personalize medicine. Leaders like AstraZeneca and Merck & Co. apply foundation models to accelerate drug discovery, trial design, and regulatory submission preparation. Sanofi’s strategic partnership with OpenAI and Novo Nordisk’s AI-driven patient services demonstrate a shift from incremental automation to AI-native innovation. What separates the top companies is not just model sophistication but their ability to integrate AI within regulated workflows. AI is also supporting commercial functions, from physician engagement to dynamic pricing and patient adherence tools.

Executive checklist

- ☐ Have we integrated GenAI into the early stages of drug development to clinical trials?
- ☐ Are we managing AI within regulatory-grade workflows that ensure reproducibility, safety, and explainability?
- ☐ Is our AI talent strategy balancing life sciences expertise with advanced data and modeling capabilities?

	Name	Ranking	Country
1	AstraZeneca	63.2	United Kingdom
2	Merck & Co.	54.0	United States
3	Eli Lilly	53.6	United States
4	Novartis	52.0	Switzerland
5	Sanofi	51.7	France
6	Novo Nordisk	49.7	Denmark
7	GSK	46.4	United Kingdom
8	Roche Holding	45.2	Switzerland
9	Johnson & Johnson	40.3	United States
10	Amgen	33.6	United States

Telecommunications

Telecommunications companies are using AI to modernize infrastructure, personalize services, and manage massive data volumes in real time. Leaders like Deutsche Telekom and KDDI are deploying AI to automate network operations, predict outages, and optimize bandwidth based on demand patterns. AT&T and China Telecom are expanding their use of GenAI in customer service, helping resolve queries faster while reducing call center costs. AI maturity in the Telecommunications sector is also marked by investment in edge intelligence and 5G-enabled analytics. The top firms distinguish themselves by using AI to shift from being utilities to intelligent digital platforms where service innovation is as important as network reliability.

Executive checklist

- ☐ Are we using AI to proactively optimize network health and deliver higher uptime and speed?
- ☐ Have we deployed GenAI to enhance customer experience across multilingual and omnichannel touchpoints?
- ☐ Are we embedding AI in edge computing strategies to capitalize on 5G and real-time applications?

	Name	Ranking	Country
1	Deutsche Telekom	69.6	Germany
2	KDDI	63.3	Japan
3	Nippon Telegraph & Tel	56.5	Japan
4	AT&T	50.9	United States
5	Verizon Communications	44.9	United States
6	China Telecom	42.4	China
7	Charter Communications	41.4	United States
8	China Mobile	37.0	China
9	China Unicom	28.0	Hong Kong
10	Orange	23.1	France

Technology

Unsurprisingly, the Technology sector dominates the AI Maturity Index with firms like Nvidia, Microsoft, and Alphabet not only deploying AI but setting the pace for its global advancement. Nvidia’s dominance in AI chips, Microsoft’s partnership with OpenAI, and Alphabet’s Gemini model reflect an industry where AI is the product. These companies lead in building foundational infrastructure and releasing developer tools, APIs, and platforms that power AI transformation across sectors. However, even among top players, differentiation now lies in how quickly they adapt to new model generations, democratize AI across customer segments, and implement guardrails for responsible scaling.

Executive checklist

- ☐ Are we accelerating our AI roadmap to lead the next generation of model development?
- ☐ Are our AI platforms being designed for both internal excellence and external scalability across industries?
- ☐ Do we have safeguards in place for responsible AI, including governance for customer and ecosystem use?

	Name	Ranking	Country
1	NVIDIA	100.0	United States
2	Microsoft	90.7	United States
3	Alphabet	88.5	United States
4	Meta Platforms	80.6	United States
5	Amazon	79.8	United States
6	SAP	77.1	Germany
7	IBM	76.8	United States
8	Tencent Holdings	75.9	China
9	Sony	75.3	Japan
10	Alibaba Group	73.5	China

Conclusion

The next frontier of AI advantage

AI maturity is no longer defined by experimentation. In 2025, the organizations pulling ahead are those that treat AI not as a siloed initiative but as a catalyst for reinvention.

Our research across 300 global companies reveals that the leaders align five forces: committed leadership, responsible governance, cross-functional talent, deep ecosystem ties, and outcome-focused scaling. These firms are embedding AI into decision-making, operations, customer engagement, and innovation to help them compete and grow.

The challenge for the rest is clear: move beyond pilots and perimeter use cases. That means rethinking your operating model, aligning C-suite ownership, industrializing responsible AI practices, and building workforce fluency at scale. In 2025 and beyond, the winners won't be those who talk about AI, but those who trust it, govern it, scale it, and unlock its full potential. The future belongs to the AI mature.
